First version: September, 2019 4

## 1 Introduction 5

**Definition 1.1** (memBer). Take  $\forall x$  such that (there exists  $\exists S$  such that  $x \in S$ ). 6

Then  $x$  is said a memBer. 7

■ 8

This article:(1) defines a binary relation that (x,y) as memBers are isomor- 9  
phic,(2) proves that the binary relation is an equivalence relation, (3) proves 10  
that all homeomorphic topological spaces are isomorphic as memBers,(4) de- 11  
fines that a memBer  $S1$  is a minor of a memBer  $S2$ . 12

I expect that readers will realize that the newly defined isomorphisms are 13  
somehow more fundamental than ,e.g., homeomorphisms of topological spaces. 14  
Because "homeomorphisms" logically resolve to "isomorphisms of memBers" 15  
whereas the inverse of it does not hold. 16

## 2 Notation 17

**Definition 2.1.** Consider " $A$  and  $B$ ". It is almost equivalent to " $B \wedge A$ ". But 18  
some times they are different. Because the meaning of  $B$  may depend on  $A$ . 19

20

" $A$  and  $B$ "  $\equiv$  " $A$  holds and  $B$  holds where the meaning of  $B$  may depend on 21  
 $A$ ". 22

" $A$  or  $B$ "  $\equiv$  " $A$  holds or  $B$  holds where the meaning of  $B$  may depend on 23  
 $\neg A$ ". 24

" $\forall x : \in S$ "  $\equiv$  "for all  $x$  such that  $x \in S$ ". 25

" $\forall x$  as an integer"  $\equiv$  "for all  $x$  such that  $x$  is an integer". 26

■

### 3 Deep member 27

**Definition 3.1** (Deep member of memBer). This definition uses a style of recursion. 28  
29

Take  $\forall(x, y)$  such that \*1 holds. Then define \*2 *and*  $\wedge$  \*3. 30

1  $x = y$  else (there exists  $\exists z$  such that  $x \in z \in^{\geq 0} y$ ). 31

2  $x$  is a deep member of  $y$ . 32

3  $x \in^{\geq 0} y$  33

■ 34

**Definition 3.2** (Space of memBer). Take  $\forall(x, y)$  such that \*1 holds. Then define \*2. 35  
36

1  $y = \{d \mid d \in^{\geq 0} x \text{ then } d \text{ is a point } \}$ . 37

2  $y$  is the space of  $x$ . 38

■ 39

### 4 Notations 40

**Definition 4.1** (Restriction of binary relation). Take  $\forall(L, X, Y, X1, Y1)$  such that \*1 holds. Then define (\*2 *and*  $\wedge$  \*3 *and*  $\wedge$  \*4). 41  
42

1  $L$  is a binary relation on  $X * Y$  *and*  $\wedge$   $X1 \subset X$  *and*  $\wedge$   $Y1 \subset Y$ . 43

2  $L[X1] := \{ (x, y) \in L \mid x \in X1 \}$ . 44

3  $L[, Y1] := \{ (x, y) \in L \mid y \in Y1 \}$ . 45

4  $L[X1, Y1] := \{ (x, y) \in L \mid x \in X1 \text{ and } y \in Y1 \}$ . 46

■

## 5 Isomorphic memBers 47

**Definition 5.1** (Isomorphic memBers). Take all  $\forall x$ . Then  $(x, x)$  are said isomorphic. 48  
49

**Definition 5.2** (Isomorphic memBers by binary relation). This definition uses a style of recursion. 50  
51

Take  $\forall(x, y, F)$  such that  $*A$  holds. Then define  $(*B1 \text{ and } *B2)$ . 52  
53

**A**  $(F \text{ is a binary relation and } *0)$  holds. 54

**0** If there exists  $\exists v : \in \{x, y\}$  such that  $space(v) = \emptyset$  Then  $x = y$  Else  $*1$ . 55  
56

**1** If there exists  $\exists v : \in \{x, y\}$  such that  $v$  is a point Then  $((x, y) \text{ are points and } (x, y) \in F)$  Else  $(*2 \text{ and } *3)$ . 57  
58

**2**  $F[space(x), space(y)]$  is a <sup>1</sup>bijection from  $*to \text{space}(x) * \text{space}(y)$ . 59

**3** There exists  $\exists f$  such that  $(*4 \text{ and } *5 \text{ and } *6)$ . 60

**4**  $f$  is a bijection from  $*to x * y$ . 61

**5** Take  $\forall(m1, m2) \in f$ . 62

**6**  $*A$  holds for  $(m1, m2, F)$  in place of  $(x, y, F)$ . 63

**B1**  $(x, y)$  are said isomorphic by  $F$  as an isomorphism. 64

**B2** Take  $\forall(x, y, F)$  such that  $(x, y)$  are isomorphic by  $F$ . Then  $(x, y)$  are said isomorphic. 65  
66

---

<sup>1</sup>To weaken the definition, replace "bijection" with "function" or with "binary relation".

## 6 Minors of memBers 67

**Definition 6.1** (Minors). Take  $\forall(x, y)$  such that  $*A$  holds. Then it is said as 68  
 $*B$ . 69

**A**  $*1$   $\text{and} \wedge *2$ . 70

**1** Take  $\forall d$ . Then  $d \in^{\geq 0} x \Rightarrow d \in^{\geq 0} y$ . 71

**2** Take  $\forall(d1, d2, d3)$  such that (take  $\forall d \in \{d1, d2, d3\}$ , then  $d \in^{\geq 0} x$ ). 72  
 Then  $(*3 \Leftarrow *4)$ . 73

**3**  $((x, d1, d3), (x, d2, d3))$  are isomorphic. 74

**4**  $((y, d1, d3), (y, d2, d3))$  are isomorphic. 75

**B**  $*5$   $\text{and} \wedge *6$ . 76

**5**  $x$  is a minor of  $y$ . 77

**6**  $x \leq^{minor} y$ . 78

■ 79

## 7 Notations 80

**Definition 7.1** (Family ). Take  $\forall(x, I, X)$  as a family  $X$ , the index set  $I$  and 81  
 the function  $x$ , then  $x$  is surjective. 82

In other words,  $X = \{x_i \mid i \in I\}$ . 83

And  $x$  is said a family's function. 84

85

**Definition 7.2** (Chain ). Take  $\forall C$  as a chain. Then  $C$  is regarded as a family 86  
 and <sup>2</sup>defined  $(I, C)$  such that  $(*1 \text{ and} \wedge *2 \text{ and} \wedge *3)$ . 87

**1**  $I$  is the index set  $\text{and} \wedge I := [\min := 1, \max := |C|] \subset N$ . <sup>3</sup>Footnote. 88

**2**  $C$  as a family's function is a bijection from  $I$  to  $C$ . 89

**3** Take  $\forall(i, j) : i \in I * I$ . Then  $i < j \equiv C_i < C_j$ . 90

---

<sup>2</sup>The same name as the chain  $C$ .

<sup>3</sup> $N$  denotes the set of all natural numbers.

## 8 Depth of memBer 91

**Definition 8.1** (Powers of set membership). Take  $\forall(C, x, y)$  such that \*1. Then 92  
define \*2  $\text{and} \wedge$  \*3. 93

1  $C$  is a chain between  $C_{min} = x$  and  $C_{max} = y$  by set <sup>4</sup>membership. 94

2  $power(C) := |C| - 1$ . 95

3  $x \in^{power(C)} y$ . 96

For example: let  $y := \{1, \{1\}\}$ . 97

Then  $1 \in^1 y$   $\text{and} \wedge$   $1 \in^2 y$ . 98

**Definition 8.2** (Depth of deep membership). Take  $\forall(C, x, y)$  such that \*1. 100  
Then define \*2. 101

1  $C$  is a longest chain between  $C_{min} = x$  and  $C_{max} = y$  by set <sup>5</sup>membership. 102

2  $depth(x, y) := power(C)$ . 103

For example: let  $y := \{1, \{1\}\}$ . 104

Then  $depth(1, y) = 2$ . 105

**Definition 8.3** (Sum of depths of deep membership). Take  $\forall C$  such that \*1. 106  
Then define \*2. 107

1  $C$  is a chain by deep <sup>6</sup>membership. 108

2  $depth(C) := \sum_{i=1}^{|C|-1} depth(C_i, C_{i+1})$ . 109

■ 111

**Proposition 1** (Depth of deep member). Take  $\forall(x, y, z)$  such that  $z \in y \in^{\geq 0} x$ . 112  
Then  $depth(z, x) > depth(y, x)$ . 113

■ 114

*Proof.* 115

• Assume it is false. 116

---

<sup>4</sup>For example,  $x \in C_2$ .

<sup>5</sup>For example,  $x \in C_2$ .

<sup>6</sup>For example,  $C_1 \in^n C_2$

- There exists  $\exists(x, y, z)$  such that it is a counterexample. 117
- Hence  $depth(z, x) \leq depth(y, x)$ . 118
- Hence  $depth(z, x) \geq depth(z, y, x) > depth(y, x) \geq depth(z, x)$ . 119
- The assumption is false. 120

□ 121

**Proposition 2** (Depth of memBer). Take  $\forall(x, y)$  such that  $y \in x$ . Then  $depth(y) < depth(x)$ . 122

■ 123

*Proof.* 124

- Assume it is false. 125
- There exists  $\exists(x, y)$  such that it is a counterexample. 126
- Hence  $depth(y)(x)$ . 127
- There exists  $\exists v : \in y$  such that ( 128  
 $depth(y) = depth(v, y) \geq depth(v, y, x) \leq depth(x)$  129  
 $)$ . 130
- Though  $depth(v, y) + 1 = depth(v, y, x)$ . 131
- The assumption is false. 132

□ 133

## 9 Isomorphic memBers as equivalence relation 134

**Definition 9.1.** In this section, \*Def refers to the definition titled as "Isomor- 135  
 phic memBers by binary relation". 136

And \*1  $\equiv$  \*2, without any explicit proof because it is trivial by \*Def. 137

And \*3 holds, without any explicit proof because it is trivial by \*Def. 138

1  $(x_i, y_i)$  are isomorphic by  $F_i$ . 139

2 \*Def.A holds for  $(x_i, y_i, F_i)$  in place of  $(x, y, F)$ . 140

3 Take  $\forall(x, y, F)$  such that (\*4  $\text{ and } \wedge$  (\*5  $\text{ or } \vee$  \*6)). Then \*7 holds. 141

4  $F$  is a binary relation. 142

<b>5</b>	$(space(x) = \emptyset \text{ and } x = y).$	143
<b>6</b>	$((x, y) \text{ are points and } (x, y) \in F).$	144
<b>7</b>	$(x, y) \text{ are isomorphic by } F.$	145
<b>Proposition 3</b>	(Restriction). Take $\forall(x, y, F1, F2)$ such that $(*A1 \text{ and } *A2 \text{ and } *A3)$ holds. Then $*B$ holds.	146
<b>A1</b>	$(F1, F2)$ are binary relations.	148
<b>A2</b>	$F1[space(x)] = F2[space(x)].$	149
<b>A3</b>	Def.A holds for $(x, y, F1).$	150
<b>B</b>	Def.A holds for $(x, y, F2).$	151
		152
<i>Proof.</i>		153
•	Assume it is false.	154
•	There exists $\exists(x, y, F1, F2)$ such that it is a minimum counterexample by $depth(x).$	155
•	Let us follow $*Def.A$ for $(x, y, F1).$	157
•	Assume the antecedent of $*0$ holds.	158
•	Hence $space(x) = \emptyset \text{ and } x = y.$	159
•	Then $*0$ holds for $(x, y, F2).$	160
•	The last assumption is false.	161
•	Assume the antecedent of $*1$ holds.	162
•	Hence $(x, y)$ are points and $(x, y) \in F1.$	163
•	Then $*1$ holds for $(x, y, F2).$	164
•	The last assumption is false.	165
•	Then $(*2 \text{ and } *3)$ holds.	166
•	Hence $*2$ holds for $(x, y, F2).$	167
•	Hence $*3$ fails for $(x, y, F2).$	168

- Hence there exists  $\exists(m1, m2) \in f$  such that 169
- $*\text{Def.A}$  holds for  $(m1, m2, F1)$  and  $*\text{Def.A}$  fails for  $(m1, m2, F2)$ . 170
- Hence  $(m1, m2, F1, F2)$  is a counterexample smaller than  $(x, y, F1, F2)$ . 171
- The first assumption is false. 172

□ 173

**Proposition 4** (Members' isomorphisms as consequent). Take  $\forall(x, y, F)$  such 174  
that  $(*A1 \text{ and } *A2)$ . Then  $(*B1 \text{ and } *B2)$  holds. 175

**A1**  $*\text{Def.A}$  holds for  $(x, y, F)$  in place of  $(x, y, F)$ . 176

**A2**  $F$  is an injection. 177

**B1** Take  $\forall m1 : \in^{\geq 0} x$ . Then there exists  $\exists m2 : \in^{\geq 0} y$  such that  $*\text{Def.A}$  holds 178  
for  $(m1, m2, F)$  in place of  $(x, y, F)$ . 179

**B2** Take  $\forall m2 : \in^{\geq 0} y$ . Then there exists  $\exists m1 : \in^{\geq 0} x$  such that  $*\text{Def.A}$  holds 180  
for  $(m1, m2, F)$  in place of  $(x, y, F)$ . ■ 181

*Proof of \*B1.* 182

- Assume it is false. 183
- Then there exists  $\exists(x, y, F, m1)$  such that it is a minimum counterexample 184  
by  $\text{depth}(m1, x)$ . 185
- It is trivial that  $(x \neq m1)$ . 186
- Consider the proposition titled as "Depth of deep member". 187
- There exists  $\exists x1$  such that  $(m1 \in x1 \text{ and } (x, y, F, x1) \text{ is not a coun- 188  
terexample})$ . 189
- Hence  $*B1$  holds for  $x1$  in place of  $m1$ . 190
- Hence there exists  $2 : \in^{\geq 0} y$  such that  $*\text{Def.A}$  holds for  $(x1, y2, F)$ . 191
- Let us follow  $*\text{Def.A}$  for  $(x1, y2, F)$ . 192
- Assume the antecedent of  $*0$  holds. 193
- Then  $\text{space}(x1) = \emptyset \text{ and } x1 = y2$ . 194
- Hence  $\text{space}(m1) = \emptyset \text{ and } m1 = m1 \text{ and } m1 \in^{\geq 0} y$ . 195

- Hence \*B1 holds for  $m1$  in place of  $m1$ . 196
- Hence  $(x, y, F, m1)$  is not a counterexample. 197
- Hence the last assumption is false. 198
- Assume the antecedent of \*1 holds. 199
- Hence  $(x1 \text{ is a point}) \text{ and } (m1 \in x1)$ . 200
- Hence the last assumption is false. 201
- Hence  $(*2 \text{ and } *3)$  must hold. 202
- Hence,  $(*4 \text{ and } *5 \text{ and } *6)$  holds. 203
- Hence \*B1 holds for  $(x, y, F, m1)$  in place of  $(x, y, F, m1)$ . 204
- Hence  $(x, y, F, m1)$  is not a counterexample. 205
- The first assumption is false. 206

□ 207

*Proof of \*B2.* 208

- Assume it is false. 209
- Then there exists  $\exists(x, y, F, m2)$  such that  $(x, y, F, m2)$  is a minimum counterexample by  $depth(m2, y)$ . 210  
211
- It is trivial that  $(y \neq m2)$ . 212
- There exists  $\exists y2$  such that  $(m2 \in y2 \text{ and } (x, y, F, y2) \text{ is not a counterexample})$ . 213  
214
- Hence \*B2 should hold for  $y2$  in place of  $m2$ . 215
- Hence there exists  $1 : \in^{\geq 0} x$  such that \*Def.A holds for  $(x1, y2, F)$ . 216
- Let us follow \*Def.A for  $(x1, y2, F)$ . 217
- Assume the antecedent of \*0 holds. 218
- Then  $space(x1) = \emptyset \text{ and } x1 = y2$ . 219
- Hence  $space(m2) = \emptyset \text{ and } m2 = m2 \text{ and } m2 \in^{\geq 0} x$ . 220
- Hence \*B2 holds for  $m2$  in place of  $m2$ . 221

- Hence  $(x, y, F, m2)$  is not a counterexample. 222
- Hence the last assumption is false. 223
- Assume the antecedent of \*1 holds. 224
- Hence  $(y2 \text{ is a point}) \text{ and } (m2 \in y2)$ . 225
- Hence the last assumption is false. 226
- Hence  $(*2 \text{ and } *3)$  must hold. 227
- Hence,  $(*4 \text{ and } *5 \text{ and } *6)$  holds. 228
- Hence \*B2 holds for  $(x, y, F, m2)$  in place of  $(x, y, F, m2)$ . 229
- Hence  $(x, y, F, m2)$  is not a counterexample. 230
- The first assumption is false. 231

□ 232

**Proposition 5** (Symmetric property). Take  $\forall B$  such that  $B$  is a binary relation. 233  
 Then let  $B^{-1}$  denote  $\{(b2, b1) \mid (b1, b2) \in B\}$ . 234  
 Take  $\forall(x, y, F)$ . Then \*A1 implies \*A2. 235

**A1** Def.A holds for  $(x, y, F)$ . 236

**A2** Def.A holds for  $(y, x, F^{-1})$ . 237

■ 238

*Proof.* 239

- Assume it is false. 240
- There exists  $\exists(x, y, F)$  such that it is a minimum counterexample by  $depth(x)$ . 241  
242
- Let us follow \*Def.A for  $(x, y, F)$  in terms of \*A1. 243
- Assume the antecedent of \*0 holds for  $(x, y, F)$  in terms of \*A1. 244
- Hence  $space(x) = \emptyset \text{ and } x = y$ . 245
- Hence \*0 holds for  $(x, y, F)$  in terms of \*A2. 246
- Hence the last assumption is false. 247

- Assume the antecedent of \*1 holds for  $(x, y, F)$  in terms of \*A1. 248
- Hence  $(x, y)$  are points  $\text{and} \wedge (x, y) \in F$ . 249
- Hence  $(y, x)$  are points  $\text{and} \wedge (y, x) \in F^{-1}$ . 250
- Hence \*1 holds for  $(x, y, F)$  in terms of \*A2. 251
- Hence the last assumption is false. 252
- Hence  $(\text{*2} \text{ and} \wedge \text{*3})$  must hold for  $(x, y, F)$  in terms of \*A1. 253
- Hence  $F[\text{space}(x), \text{space}(y)]$  is a bijection from \*to  $\text{space}(x) * \text{space}(y)$ . 254
- Hence  $F^{-1}[\text{space}(y), \text{space}(x)]$  is a bijection from \*to  $\text{space}(y) * \text{space}(x)$ . 255
- Hence \*2 holds for  $(x, y, F)$  in terms of \*A2. 256
- Hence \*3 must fail for  $(x, y, F)$  in terms of \*A2. 257
- At same time, \*3 hold for  $(x, y, F)$  in terms of \*A1. 258
- Hence there exists  $\exists(m1, m2) \in f$  such that ( 259
  - Def.A holds for  $(m1, m2, F)$   $\text{and} \wedge$  260
  - Def.A fails for  $(m2, m1, F^{-1})$ . 261
  - item ). 262
- Hence  $(m1, m2, F)$  is a counterexample. 263
- Consider the proposition titled as "Depth of memBer". 264
- Moreover  $\text{depth}(m1) < \text{depth}(x)$ . 265
- It contradicts to the title of  $(x, y, F)$  as a minimum counterexample. 266
- Hence the first assumption is false. 267

□ 268

**Proposition 6** (Reflexive property). Take  $\forall(x, F)$  such that \*A holds. Then 269  
 \*B holds. 270

**A**  $F$  is the identity function on  $\text{space}(x)$ . 271

**B** Def.A holds for  $(x, x, F)$ . 272

■ 273

<i>Proof.</i>	274
• Assume it is false.	275
• There exists $\exists(x, F)$ such that it is a minimum counterexample by $depth(x)$ .	276
• Let us follow *Def.A for $(x, x, F)$ .	277
• Assume the antecedent of *0 holds.	278
• Then *0 holds.	279
• The last assumption is false.	280
• Assume the antecedent of *1 holds.	281
• Then *1 holds.	282
• The last assumption is false.	283
• It is trivial that *2 holds. Hence *3 must fail.	284
• Let $f1$ be the identity function on $x$ .	285
• Then *3 must fail for $f1$ in place of $f$ .	286
• Though *4 holds.	287
• Hence $(*5 \text{ and } *6)$ must fail.	288
• Hence there exists $\exists(m1, m1) : \in f1$ such that *Def.A fails for $(m1, m1, F)$ .	289
• Meanwhile *Def.A holds for $(m1, m1, F[space(m1)])$ because otherwise $(m1, F[space(m1)])$ would be a counterexample smaller than a minimum counterexample, $(x, F)$ .	290 291 292
• Though consider the proposition titled as "Restriction".	293
• Then *Def.A holds for $(m1, m1, F)$ .	294
• The first assumption is false.	295
□	296

**Proposition 7** (Transitive property). Take  $\forall(B1, B2)$  such that  $(B1, B2)$  are binary relations. Then let  $B2 \circ B1$  denote  $\{(b1, b3) \mid \exists b2 \text{ such that } (b1, b2) \in B1 \text{ and } (b2, b3) \in B2\}$ . Take  $\forall(x, y, z, F1, F2)$  such that  $(*A1 \text{ and } *A2)$  holds. Then \*B holds.

<b>A1</b> Def.A holds for $(x, y, F1)$ .	301
<b>A2</b> Def.A holds for $(y, z, F2)$ .	302
<b>B</b> Def.A holds for $(x, z, F2 \circ F1)$ .	303
	■ 304
<i>Proof.</i>	305
• Assume it is false.	306
• There exists $\exists(x, y, z, F1, F2)$ such that it is a minimum counterexample by $depth(x)$ .	307 308
• Let us follow *Def.A for $(x, y, F1)$ and for $(y, z, F2)$ .	309
• Assume the antecedent of *0 holds for $(x, y, F1)$ .	310
• Hence $space(x) = \emptyset$ and $x = y$ .	311
• Hence the antecedent of *0 holds for $(y, z, F2)$ .	312
• Hence $x = y = z$ .	313
• Hence *0 holds for $(x, z, F2 \circ F1)$ .	314
• The last assumption is false.	315
• Assume the antecedent of *0 holds for $(y, z, F2)$ .	316
• Hence $space(y) = \emptyset$ and $y = z$ .	317
• Hence the antecedent of *0 holds for $(x, y, F1)$ .	318
• The last assumption is false.	319
• Assume the antecedent of *1 holds $(x, y, F1)$ .	320
• Hence $(x, y)$ are points and $(x, y) \in F1$ .	321
• Hence *1 also hold for $(y, z, F2)$ because otherwise *G.A cannot hold for $(y, z, F2)$ .	322 323
• Hence $(y, z)$ are points and $(y, z) \in F2$ .	324
• Hence $(x, z)$ are points and $(x, z) \in F2 \circ F1$ .	325
• Hence *1 holds for $(x, z, F2 \circ F1)$ .	326

- The last assumption is false. 327
- Assume the antecedent of \*1 holds  $(y, z, F2)$ . 328
- Hence  $(y, z)$  are points  $\text{and} \wedge (y, z) \in F2$ . 329
- Hence the antecedent of \*1 also hold for  $(x, y, F1)$  because otherwise \*G.A 330  
cannot hold for  $(x, y, F1)$ . 331
- The last assumption is false. 332
- Hence  $(*2 \text{ and} \wedge *3)$  holds for  $(x, y, F1)$  and for  $(y, z, F2)$ . 333
- Hence  $F1[\text{space}(x), \text{space}(Y)]$  is a bijection from \*to  $\text{space}(x) * \text{space}(y)$ . 334
- And  $F2[\text{space}(y), \text{space}(z)]$  is a bijection from \*to  $\text{space}(y) * \text{space}(z)$ . 335
- Hence  $(F2 \circ F1)[\text{space}(x), \text{space}(z)]$  is a bijection from \*to  $\text{space}(x) * \text{space}(z)$  336
- Hence \*2 holds for  $(x, z, F2 \circ F1)$ . 337
- Hence \*3 fails for  $(x, z, F2 \circ F1)$ . 338
- By the way, there exists  $(f1, f2)$  such that ( 339  
3 holds for  $(x, y, F1, f1)$  in place of  $(x, y, F, f)$   $\text{and} \wedge$  340  
3 holds for  $(y, z, F2, f2)$  in place of  $(x, y, F, f)$  341  
). 342
- Then \*3 fails for  $(x, z, F2 \circ F1, f2 \circ f1)$  in place of  $(x, y, F, f)$ . 343
- Hence, there exists  $\exists(m1, m2, m3)$  such that ( 344  
 $(m1, m2) \in f1 \text{ and} \wedge$  345  
 $(m2, m3) \in f2 \text{ and} \wedge$  346  
( the antecedent of this proposition accepts 347  
 $(m1, m2, m3, F1, F2)$  as  $(x, y, z, F1, F2)$  348  
)  $\text{and} \wedge$  349  
 $(m1, m2, m3, F1, F2)$  is a counterexample 350  
). 351
- Though  $(m1, m2, m3, F1, F2)$  is smaller than a minimum counterexample. 352
- The first assumption is false. 353

□ 354

## 10 Homeomorphism as Isomorphism 355

**Proposition 8** (Members' isomorphisms as antecedent). Take  $\forall(x, y, F, f)$  such 356  
that  $(*A1 \text{ and } *A2 \text{ and } *A3)$ . Then  $*B$  holds. 357

**A1**  $F$  is an injection. 358

**A2**  $f$  is a bijection from  $*$  to  $x*y$ . 359

**A3** Take  $\forall(m1, m2) : \in f$ . Then  $*Def.A$  holds for  $(m1, m2, F)$ . 360

**B**  $*Def.A$  holds for  $(x, y, F)$  in place of  $(x, y, F)$ . 361

*Proof.* 362

- Assume  $B$  fails. 363
- Hence there exists  $\exists(x, y, F)$  such that  $*Def.A$  fails for  $(x, y, F)$ . 364
- Let us follow  $*Def.A$  for  $(x, y, F)$ . 365
- (the antecedent of  $*0$  fails  $\text{and}$  the antecedent of  $*1$  fails  $\text{and}$   $(*2 \text{ fails } \text{or } *3 \text{ fails})$ ). 366  
367
- Hence  $(space(x) \neq \emptyset \neq space(y)) \text{ and } \wedge$  both of  $(x, y)$  are not points. 368
- Assume  $*2$  fails. 369
- Hence  $F[space(x), space(y)]$  is not a bijection from  $*$  to  $space(x) * space(y)$ . 370
- Consider  $*A1$  which says  $F$  is an injection. 371
- Hence there exists  $\exists(p_x, p_y) : \in space(x) * space(y)$  such that 372  
 $p_x \notin domain(F) \text{ or } p_y \notin image(F)$ . 373
- Consider  $*A2, *A3$  and the proposition titled as "Members' isomorphisms 374  
as the consequent". 375
- There exists  $\exists y2 \in^{\geq 0} y$  such that  $*Def.A$  holds for  $(p_x, y2, F)$ . 376
- There exists  $\exists x1 \in^{\geq 0} x$  such that  $*Def.A$  holds for  $(x1, p_y, F)$ . 377
- Meanwhile, for each of the 2 lines just above, 378  
( $*Def.A$  holds only by the if-then condition of  $*1$ ) because 379  
(each of  $(p_x, p_y)$  is a point). 380
- Hence  $p_x \in domain(F) \text{ and } p_y \in image(F)$ . 381

• Hence the last assumption is false.	382
• Hence *3 must fail.	383
• Hence *3 fails for $f$ in place of $f$ .	384
• Though by $(*A2 \text{ and } *A3), (*4 \text{ and } *5 \text{ and } *6)$ holds.	385
• Hence the first assumption is false.	386
	□ 387
<b>Definition 10.1</b> (Pair). Take $\forall\{x, y\}$ . <sup>7</sup> Then $(x, y) := \{\{x\}, \{x, y\}\}$ .	388
	■ 389
<b>Proposition 9</b> (Topological space). Take $\forall((X1, T1), (X2, T2))$ such that *A	390
holds. Then *B1 $\Rightarrow$ *B2.	391
<b>A</b> Take $i \in \{1, 2\}$ . Then $(X_i, T_i)$ is a topological space.	392
<b>B1</b> $((X1, T1), (X2, T2))$ are homeomorphic.	393
<b>B2</b> There exists $\exists F$ such that $((X1, T1), (X2, T2))$ are isomorphic by $F$ .	394
	■ 395
<i>Proof.</i>	396
B1 implies *C.	397
	398
<b>C</b> There exists $\exists(G, g)$ such that $(*C1 \text{ and } \dots \text{ and } *C4)$ .	399
	400
<b>C1</b> $G$ is a bijection from $X1$ to $X2$ .	401
<b>C2</b> $G$ is a homeomorphism for *B1.	402
<b>C3</b> $g$ is a bijection from $T1$ to $T2$ .	403
<b>C4</b> Take $\forall(t1, t2) : \in g$ . Then $(G \text{ takes } t1 \text{ to } t2)$ .	404
	405
Consider the previous proposition titled as Members' isomorphisms as antecedent	406
and refer it as *P.	407
Then *P accepts arguments as $(*D1 \text{ and } \dots \text{ and } *D6)$ .	408

---

<sup>7</sup>By Kazimierz Kuratowski.

	409
<b>D1</b> *P accepts $(X1, X2, G, G)$ in place of $(x, y, F, f)$ .	410
<b>D2</b> *P accepts $(\{X1\}, \{X2\}, G, \{(X1, X2)\})$ in place of $(x, y, F, f)$ .	411
<b>D3</b> Take $\forall(t1, t2) : \in g$ . Then *P accepts $(t1, t2, G, G)$ in place of $(x, y, F, f)$ .	412
<b>D4</b> *P accepts $(T1, T2, G, g)$ in place of $(x, y, F, f)$ .	413
<b>D5</b> *P accepts (	414
$\{X1, T1\}$ ,	415
$\{X2, T2\}$ ,	416
$G$ ,	417
$\{(X1, X2), (T1, T2)\}$	418
) in place of $(x, y, F, f)$ .	419
<b>D6</b> *P accepts (	420
$\{\{X1\}, \{X1, T1\}\}$ ,	421
$\{\{X2\}, \{X2, T2\}\}$ ,	422
$G$ ,	423
$\{(\{X1\}, \{X2\}), (\{X1, T1\}, \{X2, T2\})\}$	424
) in place of $(x, y, F, f)$ .	425
	426
Hence *P implies $(*E1 \text{ and } \wedge \dots \text{ and } \wedge *E6)$ .	427
Finally, *E6 implies this proposition.	428
	429
<b>E1</b> $(X1, X2)$ are isomorphic by $G$ .	430
<b>E2</b> $(\{X1\}, \{X2\})$ are isomorphic by $G$ .	431
<b>E3</b> Take $\forall(t1, t2) : \in g$ . Then $(t1, t2)$ are isomorphic by $G$ .	432
<b>E4</b> $(T1, T2)$ are isomorphic by $G$ .	433
<b>E5</b> $\{X1, T1\}, \{X2, T2\}$ are isomorphic by $G$ .	434
<b>E6</b> $(\{\{X1\}, \{X1, T1\}\}, \{\{X2\}, \{X2, T2\}\})$ are isomorphic by $G$ .	435
	436

## 11 Restriction of memBer by space 438

**Definition 11.1.** This definition uses a style of recursion. 439

Take  $\forall(S, X, NULL)$  such that  $(*A1 \text{ and } \wedge *A2 \text{ and } \wedge *A3)$  <sup>8</sup>holds. Then define 440  
 $*B$ . 441

**A1**  $X$  is a <sup>9</sup>space. 442

**A2**  $NULL$  is not a set. 443

**A3**  $NULL \notin^{\geq 0}(S, X)$ . 444

**B** 445

1 If  $space(S) \subset X$  Then  $S[X] := S$  Else  $*2$ . 446

2 If  $S$  is not a set Then  $S[X] := NULL$  Else  $*3$ . 447

3  $S[X] := \{s[X] \mid s \in S \text{ and } \wedge s[X] \neq NULL\}$ . 448

■ 449

## 12 Deep space 450

**Definition 12.1.** Take  $\forall(S1, S2)$  such that  $(*1 \text{ and } \wedge *2 \text{ and } \wedge *3)$ . Then de- 451  
 fine  $*4$ . 452

1  $S2 \subset \{m \mid m \in^{\geq 0} S1\}$ . 453

2 Take  $\forall(p, C)$  such that 454

( $p \in space(S1)$  and  $\wedge C$  is a chain from  $S1$  down to  $p$  by set member 455  
 ship). 456

3 Then  $C \cap S2 \neq \emptyset$  457

4  $S2$  is a deep space of  $S1$ . 458

---

<sup>8</sup>\*A3 says that  $\neg(NULL \in^{\geq 0} S)$ .

<sup>9</sup>That is,  $x$  is a set of points.
